Photo	Description	Information
	<p>Kelthane was stored in this bourbon bottle collected near Wenatchee. Pesticides should always be stored in their original containers.</p>	<p>Bourbon Kelthane copy.gif (1068269 bytes)</p>
	<p>Parathion was stored in this bourbon bottle collected near Wenatchee. Pesticides should always be stored in their original containers, and they should NEVER be stored in containers that once held food or beverages. This was a potentially deadly accident waiting to happen</p>	<p>Jim Beam parathion copy.gif (1020625 bytes)</p>
	<p>An old, cluttered shipping container used for pesticide storage. Storage areas should be periodically inspected and pesticides that are no longer used, or that should be disposed of or given to another user if still legal. Cluttered storage areas are safety hazards, especially those with aging containers.</p>	<p>Shiping container copy.gif (1150092 bytes)</p>
	<p>These steel kegs contain sodium arsenite. Most old kegs of this pesticide are in poor condition.</p>	<p>Blue drums copy.gif (1089705 bytes)</p>
	<p>Winter is a good time of year to organize your pesticide storage shed to keep it from looking like this. Never store liquids above dry materials.</p>	<p>Buckner_storage copy.gif (1005572 bytes)</p>
	<p>Empty pesticide containers should be segregated from other items.</p>	<p>Cans by shed copy.gif (1232423 bytes)</p>
	<p>Improper disposal of empty containers.</p>	<p>Unrinsed cans copy.gif (1711793 bytes)</p>

	This is an example of a great idea, but poor execution. Owners and managers must ensure that their employees properly maintain pesticide handling areas.	Outside storage cage copy.gif (1375291 bytes)
	1991 photo from an Okanogan-area abandoned pesticide storage.	Terrible storage copy.gif (1074669 bytes)
	Pesticide storage area not secured from children.	Toys_storage copy.gif (1203333 bytes)
	Wood shelves can become contaminated after years of storing pesticides. If wood shelving is used to store pesticides, the wood should be sealed to allow easy spill cleanup or even better is the use of storage tubs placed on the shelves that can contain spills and prevent further contamination.	Toys_storage_3 copy.gif (1007182 bytes)
	Pesticides should NEVER be stored where children, pets or unauthorized people have access to them.	Toys_storage_4 copy.gif (1046009 bytes)
